

CARDINAL HEALTH AND SDI BIOMED

April 2007 – SDI Biomed announced today that it has signed a distribution agreement with Cardinal Health, to distribute the SDI CA480 and SDI CA240 Clinical Chemistry Analyzers.

The SDI CA series of analyzers consist of two random-access, true walk-away clinical chemistry systems offering a wide range of testing. The CA480 with a throughput of 480 tests per hour is the fastest bench top system available and the ideal chemistry workstation for the physician office, reference laboratory and even as a backup system for hospital laboratories.

Bruno Borganti, commented: "Our systems are not only extremely fast and easy to operate but the extensive self-maintaining features allow for further reducing ownership costs in favor of additional revenues to laboratory operators". Both Systems will be featured at the SDI Biomed/Cardinal Healthcare booth at the upcoming COLA meeting on May 2-4 in San Diego CA and at the AACC show on July 17-19 in San Diego, CA.

Robert Silverberg the National Account Representative to Cardinal Health added: "We are pleased to announce this agreement which permits us to duplicate the rapid success we have experienced in our locations on a national basis. We have over 400 analyzers installed outside North America and with Cardinal Health we are now poised for meeting the POL market needs on a national basis."
